Software Engineering

Assignment no. 1:

University LMS

a) Purpose:

The purpose of university LMS is to provide an online platform where students and teachers can manage their academic activities. Student can access their courses, grades, attendance and personal informations. While teacher can mark attendance and grades and check any student status.

b) Users:

- 1- Students
- 2- Teachers
- 3- University administrators

c) Stakeholders:

- 1- Students
- 2- Teacher
- 3- University management
- 4- IT department

d) 5 Functional Requirements:

- 1- Students should be able to login to their LMS.
- 2- Teachers should be able to upload any assignments or other study material.
- 3- Student should be able to view and register their courses.
- 4- Teachers should be able to upload and mark attendance and grades.
- 5- Student should be able to view their personal information and grades and GPA.

e) 5 Non-Functional Requirements:

1- Data Security:

The system should protect users personal and academic informations.

2- Fast Response:

The system should respond quickly

3- System Availability:

The LMS must be accessible when students and teachers need it.

4- Easy to Use:

The system should be simple and easy to use.

5. Simple UI:

The UI should be simple and easy to understand.

f) 3 Risks:

Server Failure:

The LMS may stop working because of server or technical problem.

Data Loss:

Important information could be lost.

Cybersecurity Attacks:

Hackers could try to access personal informations

g) 3 Quality Attributes:

1. The system should keep informations safe
2. The systems should work correctly and consistently.
- 3- students and teachers should be able to use the system easily.

h) Where AI could be used:

- 1- AI can act as a study assistant and can solve student basic problem.
- 2- AI can help teachers create quizzes and questions.

i) What could Go Wrong if AI is Used Incorrectly?

- 1- AI may give wrong informations or incorrect grades
- 2- Student may become too dependent on AI
- 3- Student data could also be at risk if AI is not used securely.
